With more than 30 years of experience, CHENKAI has provided the worldwide customers with advanced, high-performance and reliable brake and clutch products.

The company is located at Cixi, Zhejiang, the heart of Yangtze river delta economic zone, 150km south to Shanghai. It has more than 150 workers, an experienced R&D team of 30 people and a factory that equipped with advanced dedicated machines, all only for quality assurance, production standardisation and efficiency.

CHENKAI obtains several certifications, including ISO/TS16949 and ISO14001, and is rewarded a number of quality and performance awards from government.

The Principle of “Quality First”

High quality is our pursuit. We believed the strict quality control and the trusted relationship with customers and partners are the safeguards of the company's prosperity in the long-term.

A Wide Product Range

There is no limit to what is possible, at least when it comes to our products. Based on the customer requirements, we develop our products from the initial concept to products that are ready for series production. CHENKAI has all the necessary skills to do this, supported by efficient project management systems, comprehensive development tools and testing equipment.

CHENKAI sincerely appreciates your ongoing guidance and support.

Continuous Innovation and Development

Technological innovation is the driving force of an enterprise's sustainability. Innovative product developments and program extensions are therefore the characteristic of CHENKAI. We are continuously developing new technology and environmental-friendly solutions for hydraulic brake and clutch parts.

In our company, deviations in the production processes are seen as opportunities to improvement. Therefore, not only are products optimised, but also the entire organisation is in a continuous improvement process, which develops employees' sense of responsibility and improve their personal qualities.

Professionals and Equipment

OE manufacturers take a considerably important role in the product development technically. Therefore, we continuously invest in advance equipment, professionals and educating the frontline employees. In 2017, our team have modified the dial self-regulating mechanism in a cylinder with ratchet device, which largely improved its safety and reliability meanwhile still maintains its simplicity in design. The product is approved to have outstanding reliability (self-regulating reliability test—more than 2 million times of rotation). The unique design has been highly recognised among the top light truck manufactures, and facilitated the trusted OEM relationships.

The company had introduced advanced dedicated machine, milling machine, CNC, tension meter, microscope, digital hardness tester, sealing detection equipment and durability testing equipment.

Brake Master Cylinder

Quick Response and High Brake Efficiency

The master cylinder is the heart of the brake's hydraulic system. It converts the force exerted on the brake pedal into hydraulic pressure to apply the brakes. Depressing the brake pedal moves a push rod in the master cylinder. Mounted on the push rod are a pair of pistons (primary and secondary) in tandem (one after the other) that exert force against the fluid in the master cylinder bore. The pressure created displaces fluid through the various brake circuits and lines to each of the wheels and applies the brakes.

Brake Master Cylinder

Brake Wheel Cylinder

- Automated Gap Control and General Wheel Cylinder

The wheel cylinder is a component of a hydraulic drum brake system. It is located in each wheel and is usually positioned at the top of the wheel, above the shoes. Its function is to exert force onto the shoes so as to bring them into contact with the drum and stop the vehicle with friction.

- Wedge Wheel Cylinder

By the air pressure within the brake chamber, the rod part of the wheel cylinder meeting with the chamber moves to cause piston movement in the form of a wedge, and it causes brakes by attaching the shoe to the drum.

Brake Master Cylinder

Brake Wheel Cylinder

Clutch Master Cylinder

Clutch Slave Cylinder

The clutch slave cylinder absorbs the pressure arriving from the clutch pipe and transfers it to the clutch release lever. The operating medium moves the piston forwards and disengages the clutch. On the return stroke, the clutch pushes the medium back again. This engages the clutch.

DIA.	7/8"

CSC0208

PRODUCT NO.	CSC0208
OEM	GSY118
BRAND	AUSTIN, ROVER
MODEL	Mini 1000/1300
DIA.	7/8"

CSC0330

PRODUCT NO.	CSC0330
OEM	500357840
BRAND	IVECO
DIA.	1 1/2"

CSC0268

PRODUCT NO.	CSC0268
OEM	41700-44010
BRAND	HYUNDAI
MODEL	H100
DIA.	15/16"

CSC0046

PRODUCT NO.	CSC0046
OEM	330721261B
BRAND	VOLKSWAGEN
MODEL	STN 06, 3000
DIA.	7/8"

CSC0299

PRODUCT NO.	CSC0299
OEM	GSY106
BRAND	MG
MODEL	MGB GT/Convertible
DIA.	1 1/4"

CSC1305

PRODUCT NO.	CSC1305
OEM	F1CZ7A508B
BRAND	FORD
MODEL	Escort, Tracer
DIA.	3/4"

Clutch Slave Cylinder

CSC0269

PRODUCT NO. CSC0269
DIA. 7/8"

CSC1317

PRODUCT NO. CSC1317
DIA. 7/8"

CSC0272
